## 1 UPDATE HISTORY

[illegible]

## 2 INTRODUCTION

### 2.1 About this manual

#### 2.1.1 Use of the manual

This manual presents the product range and the features as well as the functional description of an electrical chain hoist, the Facelift version.

This manual helps to provide the following:

- Range of use of the different hoist types, loads and hoisting speeds
- Standards considered in the design of the product
- List of features available for the range of these hoists, as well as technical details about the product.

## 2.2 About this product

### 2.2.1 Product range

4000	25	2	M6	11.3x31	3200	MT10CC106	3.6	4	0.7	40	<sup>1)</sup>	50	300
5000	25	2	M5	11.3x31	1600	MT10CC106	3.6	4	0.7	40	<sup>1)</sup>	50	300

\*NOTE:

- 1) If 40 % ED and 240 starts per hour, then maximum temperature +50 °C.
- 2) Change of ED % from 50 to 40 results in a change of duty group from M6 to M5. For configurations with the duty classification M5 or M4, the duty group will remain unchanged if the ED % changes from 50 to 40.
- 3)  $\frac{1}{3}$  of the cycle is with low speed and  $\frac{2}{3}$  with high speed.
- 4) Motor, lifting gear and hooks M6 / chain M5.

## 2.2.2 Technical regulations

### Certifications, standards and other technical documents

The product fulfills the requirements of the following standards: Machine directive EC; CSA; ASME HST-1; ASME B30.16, and EN14492/2.

#### This product

- is in conformity with the relevant provisions of the Machinery Directive 2006/42/EC and EMC Directive 2004/108/EC
- is applicable with the requirements of the  
**CSA Standard C22.2 No. 33** – Construction and Test of Electric Cranes and Hoists\*  
**UL 508** – Industrial Control Equipment  
**UL1004-1** – Rotating Electrical Machines – General Requirements
- has ASME duty rating up to H4 (ISO M4 – M6), depending on hoist type and hoisting speed.\*  
For information about ASME Hoist Duty Service Classification, reference ASME publication catalog ASME HST-1M and ASME B30.16 (latest edition) for electric chain hoists.
- is external sound level tested
- is RoHS compliant.

\*NOTE: For the 60 Hz motors.

## 2.2.3 Sound intensity level

- For the FL02–FL10 hoists, the maximum noise level (of the hoist) is measured at 70 dB.

### 2.2.4 Hoist weight

Frame size	Falls	Hoist weight [kg] <sup>1)</sup>	
		Without chain <sup>2)</sup>	Chain [kg/m]
02	1/1	26	0.37
02	2/1	21	0.37
05	1/1	38	0.59
05	2/1	30	0.59
10	1/1	56	1.1
10	2/1	48	2.2
16	1/1	91	1.8
16	2/1	94	3.5
25	1/1	110	2.8
25	2/1	114	5.6

<sup>1)</sup>Values are for the standard version hoist, optional features (e.g. GLS, inverter, double brake) are not included here.

<sup>2)</sup>For the frame sizes 02–10, the 1-fall hoist weight includes the counterweight.

### 3 PRODUCT DESCRIPTION

#### 3.1 Functional description of electrical chain hoist

The VR is an integrated electric chain hoist that is designed to be used for industrial applications. It is powered with an asynchronous squirrel cage motor that is controlled through contactors. The hoist can be delivered as a hook or eye suspended unit, or together with a variety of trolleys.

#### KINEMATIC CHAIN FOR ELECTRICAL CHAIN HOIST

Pos.	Part
1	Adjustment screw
2	Gear
3	Chain sprocket
4	Motor
5	Friction torque limiter
6	Brake
7	Motor torque
8	Brake torque

## 3.2 Identifying key parts of the hoist

Figure 1. 05–10 frame size hoist

Pos.	Part	Description
1	Hoisting machinery	Equipment that is composed of hoist frame, hoisting motor, gear, and
2	Hook	Composed of hook and hook block
3	Suspension hook	The upper hook with which hook-suspended hoist is fixed to its support
4	Chain bucket	Bucket where the lifting chain is gathered and stored
5	Controller	Pendant or radio device for operating the hoist

Figure 2. 16/25 frame size hoist

Pos.	Part	Description
1	Hoisting machinery	Equipment that is composed of hoist frame, hoisting motor, gear, and
2	Hook	Composed of hook and hook block
3	Suspension hook	The upper hook with which hook-suspended hoist is fixed to its support
4	Chain bucket	Bucket where the lifting chain is gathered and stored
5	Controller	Pendant or radio device for operating the hoist

### 3.3 Features

#### 3.3.1 Standard features

##### MECHANICS

No	Option
1	Mechanical overload device (friction torque limiter)
2	Disc brake that is located after the motor and the friction torque limiter, on a separate load path. It is directly linked to the load and holds the load even in case of motor or torque limiter failure.
3	2- (frame sizes 02 to 05) or 3-step (frame sizes 05 to 25) helical gear
4	Sprocket on output shaft in cantilever position
5	Operation temperature -20 °C to +50 °C (+40 °C) with rated load and speed
6	Hoist body has epoxy powder 70µm thickness paint, C2-M according to EN12944-2 and EN12944-5
7	Upper and lower hook according to DIN classification
8	Zinc plated and quenched tempered chain (class T)
9	Selection of trolleys: motor trolley, swiveling trolley, push trolley, push trolley inside hollow profile, normal headroom trolley, low headroom trolley, geared trolley With: <ul style="list-style-type: none"> <li>• Rubber buffers on trolleys</li> <li>• Integrated wheel catch and trolley retaining device</li> </ul>

##### ELECTRICS

No	Option
1	Dual speed motors with 4:1 ratio for frame size 02, 6:1 for frame sizes 05 to 25
2	Motor thermal protection with bi-metal switch
3	Motors that are classified as 'TEFC' motors with insulation class H
4	All components connected by plugs
5	Low voltage control
6	Emergency stop with main contactor
7	Separate brake rectifier that is connected to contactor (frame sizes 02 to 10), rectifier included in the low control voltage board (frame sizes 16/25)
8	Inverter traveling with electronic potentiometer (EP) or multi-step mode (MS) – trolley movement with inverter or contactors
9	Mechanical upper and lower limit switches
10	IP55 protection

### 3.3.2 Optional features

#### MECHANICS

No	Option	Description
1	Secondary brake	The hoist has two brakes. The one closer to the hoist body acts as the operational brake, if the main brake fails.
2	2- or 4-step rotating geared limit switch	The limit switch is available for solutions that need 2 or 4 adjustable stops.
3	Self-locking hook	A hook which cannot be opened, if the hook is with load.
4	Stainless steel hook block	The hook block is material is AISI316.
5	Stainless steel chain	The stainless steel chain is used optionall instead of the standard galvanized chain.
6	Manual brake release	The load can be lowered to the ground by using the lever designed for loosening the brake manually.
7	Hand control on hook	In the hand control on hook solution, the controls for lowering and lifting the load are implemented into the load hook.
8	IP66	The IP66 is a higher protection class that is available as an option.
9	Eye suspension	The standard hook suspension can be replaced alternatively by the eye suspension type.
10	Wear resistant chain guide	With the wear resistant chain guide, the hoist is fitted with a more robust chain guide type.
11	Rain cover	The rain cover for hoist helps to avoid direct contact of the hoist with rain.

#### ELECTRICS

No	Option	Description
1	4-button pendant	A pendant for applications that need 2 motions
2	6-button pendant	A pendant for applications that need 3 motions
3	Key switch on pendant	A 2-button pendant that is equipped with a key switch on the emergency stop button
4	Magnet	The pendant can be equipped with a magnet that is located on the back of the pendant
5	Optional pendant	The pendant can be replaced with an old version of the pendant (Schneider type)
6	ACF-card	The ACF card uses the main voltage to control the brake, and it has a low voltage control. The hoist does not have any limit switches. If the switches are needed, they need to be adapted to the available controls on site.
7	External plug / Flat cable gland	A special plug for power feeding
8	Time meter / hour counter	A device which counts the lifting time
9	Hard wired controls	The connections of the electrical parts are created by using wires instead of a printed circuit board
10	Radio control	The controlling of the hoist(s) is done by using a remote control device
11	Non-supply of pendant	The hoist is delivered without a pendant and a pendant cable

#### MAINTENANCE

No	Option	Description
1	Food industry oil	The used oil is NSF-H1 listed

### TROLLEY

No	Option	Description
1	Traveling limit switch	The trolley stops or slows down when the traveling limit switch is activated
2	Low headroom trolley	A special trolley design to minimize the C-dimension
3	Swivelling trolley	A special trolley design for curved tracks (minimum radius is 800 mm)
4	Towing arm	A bracket for connection of the power supply to the trolley
5	Dual travel speed	A trolley that has a 5 m/min. low and a 20 m/min. high travel speed
6	Slow variable speed	The TMU1 trolley can be upgraded to a TMU2 trolley, to achieve a traveling speed that is lower than 10 m/min.
7	Worm gearbox	A special traveling motion unit where the gearbox has a 90 degree angle. This allows to attach a travelling motor parallel to the trolley side plates, to achieve reduced side dimensions of the trolley
8	Rain cover	A rain cover for the trolley helps to avoid direct contact of the hoist with rain
9	Chain driven trolley	A trolley without a TMU and travelling movement. Trolley travel is managed by pulling the hand chain.

## 4 MAIN COMPONENTS

### 4.1 Hoisting motor

The hoisting motor is specially designed for hoisting purposes with good efficiency. The motor is classified as a 'TEFC motor' – totally enclosed fan-cooled motor. This includes an aluminum frame with cooling ribs for efficient cooling, and a cooling fan for the motor.

Motor type	Speed ratio	Power [kW]		Speed [n/rpm]		Cos $\phi$		Nominal voltage <sup>1)</sup> 230 V – Amps						Nominal voltage <sup>1)</sup> 400 V – Amps

### 4.1 Hoisting gear

The hoisting gear of the chain hoist is specially developed for hoisting appliances and has two or three helical steps. The gear is lubricated with oil so that the lubrication lasts for the designed working period of the hoist.

Figure 1. Hoisting gear constructions for the size 05 hoist type.

Frame size	Main hoisting speed [1 fall (m/min.)]	Gear type	Gear ratio
02	4	2-step	39.382
	8	2-step	39.382
	10	2-step	31.955
	16	2-step	19.576
	20	2-step	16.039
05	4	3-step	49.894
	8	3-step	49.894
	10	3-step	39.852
	16	2-step	25.286
	20	2-step	20.196
10	4	3-step	71.777
	8	3-step	71.777
	10	3-step	57.172
	16	3-step	35.832
	20	3-step	28.541
16	8	3-step	98.154
	12.5	3-step	64.501
	16	3-step	49.077
25	8	3-step	110.783
	12.5	3-step	69.586
	16	3-step	56.877
	20	3-step	46.275

## 4.2 Electrics

### 4.2.1 Cable inputs

Figure 2. Cable inputs for the frame sizes 02–10

Pos.	Part	Size (class)
1	Power supply	M20
2	Pendant controller	M20
3	TMU (TMK traveling frequency converter)	M20

Figure 3. Cable inputs for the frame sizes 16/25

Pos.	Part	Size (class)
1	Free cable gland	M20
2	Power supply and trolley connection cable	M20
3	Control cable	M20
For the frame sizes 16/25 additionally: 1 x M16; 1 x M20; 1 x M25		

## 4.2.2 Wiring principle

CD003386\_1

Figure 4. Wiring principle for the frame sizes 02–10

Pos.	Part

### 4.3 Hoisting brakes

#### 4.3.1 Single brake

The chain hoist is equipped with a disc brake which includes a rotating disc with two friction linings. The brake coil is energized by a DC voltage coming from the brake rectifier. The brake rectifier converts the AC voltage into a DC voltage. To ensure the self-cleaning function, the rotating parts of the brake are not enclosed.

The brake is designed so that it lasts for the designed working period of the hoist. The brake wear can be checked at the brake coil, through an inspection hole. The brake lining wear criteria is indicated on a sticker that is placed next to the measurement hole. If the brake wear exceeds the allowed measurement criteria, contact authorized service personnel for a brake change.

Figure 6. Single brake assembly – INTORQ and Warner brakes

#### BRAKE CHARACTERISTICS

Frame size	Brake torque [Nm/lbf]		Brake measurement [20 °C] [mm]*	
	[Nm]	[lbf]	Brake type	
			INTORQ	Warner
02	2.8	2.1	25.3	20.7
05	6.8	5.0	25.3	-
10	14	10.3	30	-
16	16	11.79	33.5	-
25	21	15.48	33.5	-

\*NOTE: The brake measurement value that is given in the table is only a theoretical value. The value varies according to manufacturer and brake series. For each case, the maximum value that is not to be exceeded is indicated in the brake sticker that is located on the brake.

### 4.3.2 Double brake (option)

The double brake assembly consists of a main brake and a secondary brake that are assembled on the same hub. During the hoisting motion, the brake board energizes the main and the secondary brake simultaneously. When the hoisting motion stops, the main brake switches off immediately. The secondary brake remains energized for a few milliseconds by the motor inductive effect.

The main brake holds the first position (located 'on the top') in the double brake assembly, which makes the checking of the brake wear easier.

The secondary brake works as a back-up brake for the main brake. It becomes the functional brake only if the main brake is damaged in a way that it cannot hold the load. If the main brake operates normally, there is no need to check the wear on the secondary brake.

Figure 7. Double brake assembly – INTORQ brake

### BRAKE CHARACTERISTICS

Frame size	Brake amount (pcs)		Brake torque [Nm/lbf]				Brake measurement [20 °C] [mm] <sup>2)</sup>	
	Single brake	Double brake	Main brake		Secondary brake <sup>1)</sup>		Brake type	
			[Nm]	[lbf]	[Nm]	[lbf]	INTORQ	Warner
02	1	2	2.8	2.1	2.8	2.1	25.3	20.7
05	1	2	6.8	5.0	6.8	5.0	25.3	-
10	1	2	14	10.3	14	10.3	30	-
16	1	2	16	11.79	16	11.79	33.5	-
25	1	2	21	15.48	21	15.48	33.5	-

1) The secondary brake is only a back-up brake for the main brake. If the main brake operates normally, there is no need to check the wear on the secondary brake.

2) The brake measurement value that is given in the table is a theoretical value. The value varies according to manufacturer and brake series. For each case, the maximum value that is not to be exceeded is indicated in the brake sticker that is located on the brake.

### LENGTH EXTENSION

The following optional features, if fitted, extend the hoist length as indicated in the table:

- Double brake
- Geared limit switch (+ double brake)
- Stand-by heating

Frame size	Length extension [mm]
02	115
05	132
10	132
16	114
25	112

Figure 8. Hoist with extension profile part.

### 4.3.3 Manual brake release (option)

The manual brake release feature is available as an option. This feature allows you to release the brake by hand in situations where you need to be able to lower the load manually.

The manual brake release should only be used in emergency situations where the brake cannot be released normally. Extensive use of the manual brake release as well as high lowering speed can result in immediate wear-out of the brake lining. Note the following warnings that are related to the use of the manual brake release.

The instructions for the use of the manual brake release function are given in a sticker that is attached to the hoist frame. The sticker also contains the relevant warnings to be taken into account. See the following example illustration:

### 4.3.4 Brake coil voltages and resistance

#### BRAKE COIL VOLTAGE

Motor voltage [Vac]		Frequency [Hz]	Brake voltage [Vd]
208 V	3 phases	60	103
208V-230V / 460 V reconnectable	3 phases	60	190
380V-415V	3 phases	50/60	190
440V-480V	3 phases	60	190

\*NOTE: All values are also considered as +/-10% of nominal voltage.

#### BRAKE COIL RESISTANCE

Frame size	Brake type [single brake]		Brake torque		Rated voltage [V]	Coil resistance [20 °C]	
	INTORQ	Warner	[Nm]	[lbf]		min. [Ohm]	max. [Ohm]
02	-	5UV005A110P2	2.8	2.1	103	400	550
02	-	5UV005A110P1	2.8	2.1	190	1500	2030
02	BFK457-06		2.8	2.1	103	496.6	564.9
02	BFK457-06		2.8	2.1	190	1661	1949
02	BFK457-06		2.8	2.1	255	2439	2816
02	BFK457-06		2.8	2.1	320	4736	5548
05	BFK457-06		6.8	5.0	103	496.6	564.9
05	BFK457-06		6.8	5.0	190	1661	1949
05	BFK457-06		6.8	5.0	255	2439	2816
05	BFK457-06		6.8	5.0	320	4736	5548
10	BFK457-08		14	10.3	103	398.9	449.8
10	BFK457-08		14	10.3	190	1366	1552
10	BFK457-08		14	10.3	255	2167	2454
10	BFK457-08		14	10.3	320	3418	3921
16	BFK457-10		16	11.79	103	313	350
16	BFK457-10		16	11.79	190	1125	1282
16	BFK457-10		16	11.79	255	2060	2285
16	BFK457-10		16	11.79	320	3227	3614
25	BFK457-10		21	15.48	103	313	350
25	BFK457-10		21	15.48	190	1125	1282
25	BFK457-10		21	15.48	255	2060	2285
25	BFK457-10		21	15.48	320	3227	3614

### 4.4 Overload device: Friction torque limiter

The overload protection of the hoisting unit is ensured through a direct acting limiting device, the friction torque limiter. The torque limiter meets the requirements of the EN14492-2 standard that are set for this type of hoisting units.

The setting of the friction torque limiter allows the hoisting unit to lift a load that corresponds to the dynamic test load of 110% (EUR) and 125% (US) of the SWL (safe working load). It prevents the hoisting unit from lifting a load of 160% of the SWL. The friction torque limiter enables the brake to hold the load without any interaction with the friction torque limiter.

The construction of the friction torque limiter assembly varies according to the hoist frame size. The hoist bodies 02–05 use the same kind of friction torque limiter with just one torque limiter disc, whereas the bigger models, 10–25, are built with a torque limiter construction that includes two torque limiter discs. An intermediate disc is placed between the two torque limiter discs, providing the construction with altogether three friction surfaces to increase the torque.

Figure 9. The following illustration presents the friction torque limiter type that is used in the hoists with frame sizes 02 and 05. It has only one torque limiter disc.

Pos.	Part
1	Setting screw
2	Belleville washers
3	Torque limiter disc with lining

Figure 10. The friction torque limiter for the frame sizes 10–25. This torque limiter is built with two torque limiter discs and an intermediate disc between them, to engage altogether three friction surfaces – resulting in an increased torque.

Pos.	Part
1	Setting screw
2	Belleville washers
3	Torque limiter discs with lining
4	Intermediate torque limiter disc

### 4.5 Limit switch: Rotating geared limit switch

Figure 11. 4-step rotating geared limit switch\* for frame sizes 05–10

Pos.	Part
1	Fixing plate
2	Coupling
3	Rotating geared limit switch

\*NOTE: The rotating geared limit switch is available as a 2-step or a 4-step version.

Figure 12. 2-step rotating geared limit switch\* for frame sizes 16/25

Pos.	Part
1	Fixing plate
2	Coupling
3	Rotating geared limit switch

\*NOTE: The rotating geared limit switch is available as a 2-step or a 4-step version.

### 4.5.1 Functional description of the rotating geared limit switch

#### 2-step rotating geared limit switch

The 2-step rotating geared limit switch works together with the internal controls as an adjustable upper and lower stop limit.

#### 4-step rotating geared limit switch

The 4-step rotating geared limit switch provides, together with the internal controls, an adjustable upper and lower stop limit. Two (2) of the cams are not connected to the controls, which means they can be used freely for the end-user requirements.

If the hoist is equipped with a geared limit switch, the cutting points (upper and lower limits) of the limit switch need to be adjusted before starting to operate the hoist. A sticker (2), that is placed next to the cover plate (1) that protects the geared limit switch cams (adjustment holes) on the hoist profile, gives more detailed information about each rotating geared limit switch version and the function of the limit switch adjustment screws.

Figure 13. Rotating geared limit switch information sticker and adjustment screw (cams) cover plate on the hoist profile, located on the chain bag side of the hoist.

1. Upper (UP) limit 1
2. Lower (DOWN) limit 1
3. Upper (UP) limit 2
4. Lower (DOWN) limit 2
5. Limit switch ID number

Figure 14. Information sticker for the limit switch adjustment (example of a 4-step rotating geared limit switch).

## 4.5.2 Rotating geared limit switch types

2-step geared limit switch	4-step geared limit switch
The setscrew 1 is the upper limit, and the setscrew 2 the down limit.	The setscrew 1 is the upper limit 1 (UP 1) and the setscrew 2 the down limit 1 (DOWN 1). The setscrew 3 is the upper limit 2 (UP 2) and the setscrew 4 the down limit 2 (DOWN 2).

Frame size	Type	Limit switch type	
		2-step	4-step
02	Stromag	151-90460-180	151-90459-180
05	Stromag	151-90460-180	151-90459-180
10	Stromag	151-90460-180	151-90459-180
16	Stromag	151-90460-180	151-90459-180
25	Stromag	151-90460-180	151-90459-180

## 4.5.3 Operational limits

The operational limits for a standard rotating limit switch are as follows:

Frame size	Max. HOL <sup>1)</sup> [m]	
	Ratio 180	Ratio 280
02	20.3	31.60
05	25.8	40.20
10	37	57.60
16	49.7	77.40
25	57.1	88.90

<sup>1)</sup>The lifting heights given are for the 1-fall hoists.

<sup>2)</sup>The hoist length increases in configurations with a 4-step rotating geared limit switch and with the ratio 470.

### 4.6 Chain reeving components

The chain hoist units are fitted with a special patented chain drive. The solution includes additional supporting (intermediate) teeth on the chain sprocket which improve the support for the chain and reduce stress on the chain.

The chain sprocket has five pockets and five intermediate teeth on the sprocket. The intermediate teeth enable an accurate positioning of the chain, resulting in less chain wear and a longer lifetime of the chain.

CD003449\_1

### 4.6.1 Chain sprocket

Frame size	Chain sprocket	Chain	Nbr of pockets	D prim [mm]
02	SINGLE	4 x 11	5	35.866
05	SINGLE	5 x 14	5	45.61
10	SINGLE	7 x 20	5	65.45
16	SINGLE	9 x 27	5	87.869
25	SINGLE	11.3 x 31	5	100.978

### 4.6.2 Return sprocket

Frame size	Chain sprocket	Chain	Nbr. of pockets	D prim [mm]	D axe [mm] [Ø]	B [mm]
02	SINGLE	4 x 11	5	35.866	16H7	20.0 -0.1
05	SINGLE	5 x 14	5	45.61	16H7	25.5 +-0.1
10	SINGLE	7 x 20	5	65.35	32H7	33.0 -0.1
16	SINGLE	9 x 27	5	87.869	44F6	35.0 -0.1
25	SINGLE	11.3 x 31	5	100.978	44F6	40.0 -0.1

\*NOTE: The return sprocket is only for the 2-fall hoist versions.

## 4.7 Hoist suspension type

### 4.7.1 Eye suspension

Figure 15. Eye suspension for frame sizes 02–10

Frame size	Dimensions [mm]										
	L	I	D [Ø]	d [Ø]	hd	ha	ht	hf	W	w	th
02	39	28	50	32	9	70	9	8	32	16.5	16
05	47	35	60	38	16	75	11	14	36	19	18
10	47	39	68	42	14	92	13	16	54	26	18

\*NOTE **1-fall hoists**: The eye leans towards the back of the hoist. **2-fall hoists**: The eye leans towards the front of the hoist. This is marked with markings 'I' and 'II' on the top of the hoist body.

Figure 16. Eye suspension for frame sizes 16–25

<sup>1)</sup>The dimensions a<sub>2</sub> are given with the hook latch opened.

### 4.8.2 Safety hook / self-locking hook (option)

Figure 24. Safety hook

Hook type	Dimensions [mm]			
	L	B	G	H
<b>BKT 6-10</b>	90	29	15	21
<b>BKT 7/8-10</b>	111	37	17	26
<b>BKT 10-10</b>	133	45	21	30

Frame size	Falls	Hook type [BKT]	Influence to C-dimension [+mm]
<b>02</b>	1/1	6-10	16
<b>02</b>	2/1	6-10	7
<b>05</b>	1/1	6-10	3
<b>05</b>	2/1	7/8-10	7
<b>10</b>	1/1	7/8-10	5
<b>10</b>	2/1	10-10	13
<b>16</b>			*
<b>25</b>			*

\*NOTE: Available through 2<sup>nd</sup> level support.

### 4.8.3 Stainless steel hook

Figure 25. Stainless steel hook assembly

Pos.	Description	Stainless steel
1	Nut	X
2	Bearing	
3	Needle thrust bearing	
4	Rivet	X
5	Hook	X
6	Spring	X
7	Safety latch	X

\*NOTE: The bearing and the needle thrust bearing of the stainless steel hook assembly are not available as stainless steel parts.

### MAXIMUM LOAD

Maximum loads for stainless steel hook are offered according to the same rules as for the stainless steel chain.

Frame size	Falls	Max load [kg]	Hook type [RSN]
02	1/1	200	025
02	2/1	*	
05	1/1	320	025
05	2/1	*	
10	1/1	630	05
10	2/1	1250	1
16	1/1	*	
16	2/1	*	
25	1/1	*	
25	2/1	*	

\*NOTE: Available at a later point of time.

### 4.9 Hook blocks

The material of the hook block rubber part is Santoprene-8221.65.

#### 4.9.1 Single fall hook blocks

Figure 26. Single fall (1/1) hook block for frame sizes 02–10

Figure 27. Single fall (1/1) hook block for frame sizes 16–25

Pos.	Part
1	Limit switch activator
2	Grip area
3	Turnable hook with safety latch, axial needle bearings

#### DIMENSIONS:

Frame size	Reeving	Dimensions [mm]			
		A	B	C	a <sub>2</sub> <sup>1)</sup>

### DIMENSIONS:

Frame size	Reeving	Dimensions [mm]			
		A	B	C	a <sub>2</sub> <sup>1)</sup>
16	1/1	137	126	110	42.9
25	1/1	155.5	140	120	48
16	2/1	160	237	153	50
25	2/1	186.5	270	176	55.6

<sup>1)</sup>The dimensions a<sub>2</sub> are given with the hook latch opened.

<sup>2)</sup>The stainless steel hook blocks have the same dimensions as the standard hook blocks.

### 4.9.3 Stainless steel hook block (option)

The material for the stainless steel hook block is AISI 316L.

Pos.	Description	Stainless steel
1	Nut	X
2	Hook bottle	X
3	Pin	
4	Screw	X
5	Hook	X

\*NOTE: The pin (3) in the stainless steel hook block is not available as a stainless steel part.

4.10 Hand control on hook feature (option)

Pos.	Part
1	Fixing set
2	Push button unit
3	Hook assembly
4	Coupling set
5	Chain stop

Frame size	Max. load [kg]	Max.HOL [m]	C-dimension [mm]	
			Eye suspension	Hook suspension
02	320	5	866	917
05	500	5	885	937
10	*			
16	*			
25	*			

\*NOTE: Configuration not available.

### 4.11 Hoisting chains

#### 4.11.1 Safety factors for chains

Frame size	Static safety factor
02	5 to 6.4
05	5 to 6.4
10	5 to 6.4
16	6.4
25	6.4

#### 4.11.2 Chain technical data

The load chain is marked with a label that contains information about the chain manufacturer and manufacturing date as well as the chain size and grade.

#### DIMENSIONS:

Chain size	Unit	02		05		10	
		4 x 11		5 x 14		7 x 20	
Diameter	d [mm]	4	+0.2 -0.2	5	+0.2 -0.2	7	+0.03 -0.03

### 4.11.3 Chain bags

#### DIMENSIONS:

Frame size	Bag capacity [m]	Chain size	Dimensions [mm]	
			A	B
02	6	4 x 11	390	145
02	16	4 x 11	573	149
02	35	4 x 11	723	149
05	6	5 x 14	472	160
05	16	5 x 14	538	164
05	25	5 x 14	617	164
10	6	7 x 20	670	200
10	16	7 x 20	712	204
10	30	7 x 20	782	204
16	12	9 x 27	730	290
16	30	9 x 27	942	300
25	12	11.3 x 31	809	300
25	30	11.3 x 31	948	300

\*NOTE: The dimensions are valid for hoists equipped with a single fall reeving.

#### CHARACTERISTICS:

Material	High-density polyethylene
Weight	0.93 to 0.97 g/cm <sup>3</sup>
Wall thickness	3 mm [0.12 in]
Max. temp	110 °C [230F]
Color	Black

4.12 Traveling motors

Three different inverter drive units are used as standard for the varying chain hoist applications.

The frequency converter Variator 2VT is mounted on the side of the unit and is connected with a plug to the chain hoist.

The TMU 2 is also available as a 2-speed motor version.

Speed control	Gearless drive	Geared drive
Inverter	TMU 1 (150 W)	TMU 2 (300 W)
Inverter		TMU 3 (400 W)
2-speed		TMU 2 50Hz: 300/50 W 60Hz: 370/70 W

Pos.	Part
1	Gear/motor unit
2	Brake friction discs
3	Brake disc
4	Aluminum ring
5	Adjustment nut
6	Motor cover
7	Electric box
8	Frequency converter
9	Connecting cable
10	Fixing screws

### 4.12.1 Inverter motor data

	Inverter motors							
	Standard						Options	
	TMU 1 [35Hz]		TMU 2 [100Hz]		TMU 3 [100Hz]		TMU 2	TMU 2
Traveling speed [m/min.]	LS	HS	LS	HS	LS	HS	LS	HS

## 4.13 Trolley constructions

### 4.13.1 Trolley fixation types

Figure 31. **Suspension hook**

The fixation with the suspension hook is used in hook suspended hoist models, with fixed hoist positions, and in hoists equipped with a push trolley.

Figure 32. **Eye suspension**

The fixation with the eye suspension is used e.g. with hoists attached to a Light crane system profile.

**Figure 33. Coupling part**

*The fixation of the trolley with the coupling part is used with the motor trolley solutions.*

## 4.13.2 Trolley constructions

**Figure 34. Push trolley hoist**

*In the push trolley applications, the the hoist is attached to the push trolley with a suspension hook.*

**Figure 35. Push trolley inside hollow (LCS) profile**

*In the Light crane system solutions, the hoist is attached to the trolley with an eye suspension.*

**Figure 36. Normal headroom trolley**

*The normal headroom motor trolley is the standard trolley solution in environments with no special limitations in the hoist headroom area. The hoist is attached to the trolley with a coupling part fixation. The normal headroom trolley version will be replaced later with the compact motor trolley solution.*

## 5 LUBRICATION

### 5.1 Lubrication charts

Pos.	Component	Intervals
1	Secondary/output shaft (traveling transmission)	Annual
2	Hoisting transmission	Lubricated for the designed working period of the product
3	Traveling wheel bearings	Lubricated for the designed working period of the product
4	Chain	From 1 week – up to a year (depending on the usage)

## 5.2 Lubricant information

### 1 Traveling transmission (secondary/output shaft)

- Requires lubrication annually. Remove the plug and grease the open transmission.

Installation	Trade name and number	Quantity
Factory installed	MOBILITH SHC 460	7.5 cl

CD002640\_1

### 2 Hoisting transmission (gear)

- Lubricated with oil. Lubrication will last for the designed working period of the hoist.

Installation	Trade name and number	Quantity
Factory installed	Dexron III	Lubricated for the designed working period of the hoist*

\*NOTE: If you need to add lubricant for the hoisting transmission, see the table below for the correct fill amount.

Frame size	Quantity of oil needed [l]
02	0.25
05	0.23
10	0.6
16	1.6
25	2.0

- Available as an option: Food industry oil.

Installation	Trade name and number	Quantity
Factory installed	Klüberoil 4 UH1- 220 N	See table

Frame size	Quantity of oil needed [l]
02	0.25
05	0.23
10	0.6
16	2.0
25	2.5

### 4

#### Chain

- Lubricate the chain before first run and after that when needed.
- The lubrication interval varies from a minimum of one week to one year, depending on the usage.

Installation	Trade name and number	Quantity
Lubricate before 1 <sup>st</sup> run	Renolit LZR 000	As required

- Available as an option: Oil lubricant.

Installation	Trade name and number	Quantity
Lubricate before 1 <sup>st</sup> run	Mobil Gear 632	As required

- Available as an option: Food industry oil.

Installation	Trade name and number	Quantity
Lubricate before 1 <sup>st</sup> run	Exalub AL 46	As required

## 6 LIST OF MATERIALS AND COATINGS

### MATERIALS:

Part	Fabrication	Material type	Norm
Frame	Pressure die casted aluminum alloy	GD-AISI9CU3	EN AC – AISI9Cu3
Suspension hook	Forged steel	34CrNiMo6	EN10250-3
Suspension eye	Machined plate	S355J2	EN-GJS-500-7
Covers	Pressure die casted aluminum alloy	GD-AISI9CU3	EN AC – AISI9Cu3
Profiles	Extruded aluminum alloy	AlMg0.7Si	EN AW - 6063
Gear wheels	Alloy steel	20NiCrMo2-2 / 16MnCr5	EN 10060
Chain bucket	High-density polyethylene	PEHD BLACK	
Hooks	Forged steel	34CrMo4	EN 10083
Hook blocks	Pressure die casted aluminum	GD-AISI9CU3	EN AC – AISI9Cu3
Chains	Bended and welded alloy steel	Special steel	EN 818-7
Rubber parts	Molded neoprene	Santoprene / Geolast	
Wheels	Forged steel, casted iron	C40 and GJS-700-2	EN 10060

### LUBRICANTS:

Component	Lubricant
Traveling transmission	MOBILITH SHC 460
Hoisting transmission (gear)	Dexron III / Klüberoil 4 UH1- 220 N
Chain	Grease: Renolit LZR 000
	Oil: Mobil Gear 632 / Exalub AL 46

### COATINGS:

Component	Lubricant
Aluminum alloy components	Epoxy polyester powder painting (70 µm)
Steel components	C2-M painting
Chain	Zinc plating

### COLOR CODES:

Component	Color code				
	Konecranes	Verlinde	SWF	R&M	Stahl
Body	RAL 7021	RAL 7021	RAL 7021	RAL 7021	RAL 7021
Frame cover	NCS-S0585-Y80R	DZ2369	RAL 9006	RAL 2021	RAL 6018
Hook	RAL 1021	RAL 1021	RAL 1021	RAL 1021	RAL 1021

## 7 LOAD RANGE AND DUTY CLASSES

### 7.1 Hoist classifications

The mechanism group – M4, M5, or M6 – of an electric chain hoist depends on the operating time per working day and on the class of load spectrum.

The hoist operating time ( $O_t$ ) can be calculated by using the following formula:

$$O_t = \frac{2 \times \text{HOL(m)} \times \text{No. of cycles} \left(\frac{1}{h}\right) \times \text{working time} \left(\frac{h}{\text{day}}\right)}{60 \left(\frac{\text{min}}{h}\right) \times \text{lifting speed} \left(\frac{m}{\text{min}}\right)}$$

The actual load spectrum factor can be calculated using the following schema:

Load %	Lifting time %		Factor $k^3$		Load spectrum factor
100%	<input type="text"/>	*	<input type="text" value="1"/>	=	<input type="text"/>
	+				
80%	<input type="text"/>	*	<input type="text" value="0.51"/>	=	<input type="text"/>
	+				
60%	<input type="text"/>	*	<input type="text" value="0.22"/>	=	<input type="text"/>
	+				
40%	<input type="text"/>	*	<input type="text" value="0.06"/>	=	<input type="text"/>
	+				
20%	<input type="text"/>	*	<input type="text" value="0.01"/>	=	<input type="text"/>
	+				
0%	<input type="text"/>	*	<input type="text" value="0"/>	=	<input type="text"/>
	=				
Sum:	100%			Sum:	<input type="text"/>
			Divide by 100:		/100 =
			Load spectrum factor, $k_m$ :		<input type="text"/>

Class of load spectrum	Load spectrum $k_m$
L1	$k_m \leq 0.125$
L2	$0.125 < k_m \leq 0.250$
L3	$0.250 < k_m \leq 0.500$
L4	$0.500 < k_m \leq 1$

### LOAD SPECTRUM CLASSES:

#### L1 Light

Mainly operated at very low loads and in exceptional cases at maximum loads.

#### L2 Medium

Operated continually at low loads and frequently at maximum loads.

#### L3 Heavy

Operated continually at medium loads and frequently at maximum loads.

#### L4 Very heavy

Operated regularly at maximum and at almost maximum loads.

Load spectrum		Average operating time per working day [hrs]			
L1	Light	≤ 2	≤ 4	4 - 8	8 - 16
L2	Medium	≤ 1	≤ 2	2 - 4	4 - 8
L3	Heavy	≤ 0.5	≤ 1	1 - 2	2 - 4
L4	Very heavy	≤ 0.25	≤ 0.5	0.5 - 1	1 - 2
FEM/ISO rating			1Bm/M3	1Am/M4	2m/M5

The following table shows the theoretical service lifetime for ISO ratings M3, M4, M5, and M6:

Load spectrum		Theoretical service life [hrs]			
L1	Light	3150	6300	12500	25000
L2	Medium	1600	3200	6300	12500
L3	Heavy	800	1600	3200	6300
L4	Very heavy	400	800	1600	3200
FEM/ISO rating		1Bm/M3	1Am/M4	2m/M5	3m/M6
